

**§ 98.366**

**40 CFR Ch. I (7–1–11 Edition)**

(b) For missing gas flow rates or CH<sub>4</sub> content data, the substitute data value shall be the arithmetic average of the quality-assured values of that parameter immediately preceding and immediately following the missing data incident. If, for a particular parameter, no quality-assured data are available prior to the missing data incident, the substitute data value shall be the first quality-assured value obtained after the missing data period.

**§ 98.366 Data reporting requirements.**

(a) In addition to the information required by § 98.3(c), each annual report must contain the following information:

- (1) List of manure management system components at the facility.
- (2) Fraction of manure from each animal type that is handled in each manure management system component.
- (3) Average annual animal population (for each animal type) for static populations or the results of Equation JJ-4 for growing populations.
- (4) Average number of days that growing animals are kept at the facility (for each animal type).
- (5) The number of animals produced annually for growing populations (for each animal type).
- (6) Typical animal mass (for each animal type).
- (7) Total facility emissions (results of Equation JJ-15).
- (8) CH<sub>4</sub> emissions from manure management system components listed in § 98.360(b), except digesters (results of Equation JJ-2).
- (9) VS value used (for each animal type).
- (10) B<sub>0</sub> value used (for each animal type).
- (11) Methane conversion factor used for each MMS component.
- (12) Average ambient temperature used to select each methane conversion factor.
- (13) N<sub>2</sub>O emissions (results of Equation JJ-13).
- (14) N value used for each animal type.

(15) N<sub>2</sub>O emission factor selected for each MMS component.

(b) Facilities with anaerobic digesters must also report:

- (1) CH<sub>4</sub> emissions from anaerobic digesters (results of Equation JJ-5).
- (2) CH<sub>4</sub> flow to the digester combustion device for each digester (results of Equation JJ-6, or value from fully integrated monitoring system as described in 98.363(b)).
- (3) CH<sub>4</sub> destruction for each digester (results of Equation JJ-11).
- (4) CH<sub>4</sub> leakage for each digester (results of Equation JJ-12).
- (5) Total annual volumetric biogas flow for each digester (results of Equation JJ-7).
- (6) Average annual CH<sub>4</sub> concentration for each digester (results of Equation JJ-8).
- (7) Average annual temperature at which gas flow is measured for each digester (results of Equation JJ-9).
- (8) Average annual gas flow pressure at which gas flow is measured for each digester (results of Equation JJ-10).
- (9) Destruction efficiency used for each digester.
- (10) Number of days per year that each digester was operating.
- (11) Collection efficiency used for each digester.

**§ 98.367 Records that must be retained.**

In addition to the information required by § 98.3(g), you must retain the calibration records for all monitoring equipment, including the method or manufacturer's specification used for calibration.

**§ 98.368 Definitions.**

All terms used in this subpart have the same meaning given in the Clean Air Act and subpart A of this part.

TABLE JJ-1 TO SUBPART JJ OF PART 98—ANIMAL POPULATION THRESHOLD LEVEL BELOW WHICH FACILITIES ARE NOT REQUIRED TO REPORT EMISSIONS UNDER SUBPART JJ <sup>1,2</sup>

Animal group	Average annual animal population (Head) <sup>3</sup>
Beef .....	29,300

## Environmental Protection Agency

## Pt. 98, Subpt. JJ, Table JJ-3

Animal group	Average annual animal population (Head) <sup>3</sup>
Dairy .....	3,200
Swine .....	34,100
Poultry:	
Layers .....	723,600
Broilers .....	38,160,000
Turkeys .....	7,710,000

<sup>1</sup> The threshold head populations in this table were calculated using the most conservative assumptions (high VS and N values, maximum ambient temperatures, and the application of an uncertainty factor) to ensure that facilities at or near the 25,000 metric ton CO<sub>2</sub>e threshold level were not excluded from reporting.

<sup>2</sup> For facilities with more than one animal group present refer to § 98.360 (2) to estimate the combined animal group factor (CAGF), which is used to determine if a facility may be required to report.

<sup>3</sup> For all animal groups except dairy, the average annual animal population represents the total number of animals present at the facility. For dairy facilities, the average annual animal population represents the number of mature dairy cows present at the facility (note that heifers and calves were included in the emission estimates for dairy facilities using the assumption that the average annual animal population of heifers and calves at dairy facilities are equal to 30 percent of the mature dairy cow average annual animal population, therefore the average annual population for dairy facilities should not include heifers and calves, only dairy cows).
